Joshua Gancher

gancher.dev | jgancher@andrew.cmu.edu

Research Interests

I apply tools from Formal Methods and Programming Languages to construct, certify, and give formal semantics to secure systems. I am particularly interested in reasoning about security for cryptographic mechanisms used in practice. Broadly, I am interested in applied cryptography, distributed systems, type systems, compiler correctness, proof assistants, and formal methods.

Education

- **Ph.D. in Computer Science**. Cornell University. December 2021.
    - Co-advised by Elaine Shi and Greg Morrisett. Thesis: Equational Reasoning for Verified Cryptographic Security.
- **B.A. in Mathematics**. Reed College. May 2016.
    - Thesis: Fully Homomorphic Encryption.

Appointments

- **Assistant Professor**. Northeastern University. Fall 2024.
- **Postdoctoral Fellow**. Carnegie Mellon University. 2021 - Present.
    - Advised by Bryan Parno. Research Focus: Type systems for secure cryptographic protocols.
- **Amazon Automated Reasoning Group**. Software Engineering Intern. Summer 2019.
    - Delivered formal proofs and specifications for Amazon Encryption SDK
    - Created a compiler from internal protocol description language to Dafny
- **Galois, Inc.** Software Engineering/Research Intern. Summer 2017.
    - Worked with Air Force Research Lab to migrate codebase to Rust
    - Extended Crucible symbolic execution engine to handle Rust

Service

- **Program Committee**, FCS 2020
- **Program Committee**, FC 2023
- **Program Committee**, SPLASH Student Research Competition 2023
- **Program Committee**, SPLASH SRC 2023
- **Organizing Committee**, CMU Secure Blockchain Summit 2024
- **Program Committee**, FCS 2024
- **Program Committee**, CCS 2024
- **Program Committee**, USENIX 2025

- **Program Committee**, USENIX 2025

- **Program Committee**, PriSC 2025

- **Program Committee**, PLDI 2025

Publications and Preprints

- **WaveCert: Formal Compiler Validation for Asynchronous Dataflow Programs.** OOPSLA 2024.
  Zhengyao Lin, Joshua Gancher, and Bryan Parno.

- **Secure Synthesis of Distributed Cryptographic Applications**.
  CSF 2024.
  Cosku Acay, Joshua Gancher, Rolph Recto, and Andrew Myers.

- **OWL: Compositional Verification of Security Protocols via an Information-Flow Type System**.
  IEEE S&P 2023.
  Joshua Gancher, Sydney Gibson, Pratap Singh, Samvid Dharanikota, and Bryan Parno.

- **A Core Calculus for Equational Proofs of Cryptographic Protocols**.
  POPL 2023.
  Joshua Gancher, Kristina Sojakova, Xiong Fan, Elaine Shi, and Greg Morrisett.

- **Viaduct: An Extensible, Optimizing Compiler for Secure Distributed Programs**.
  PLDI 2021.
  Coşku Acay, Rolph Recto, Joshua Gancher, Andrew Myers, and Elaine Shi.

- **Symbolic Proofs for Lattice-Based Cryptography**.
  CCS 2018.
  Gilles Barthe, Xiong Fan, Joshua Gancher, Benjamin Grégoire, Charlie Jacomme and Elaine Shi.

- **Externally Verifiable Oblivious RAM**.
  PETS 2017.
  Joshua Gancher, Adam Groce, and Alex Ledger.

Funding

- **NSF: SatC: CORE: Small: Automating the End-to-End Verification of Security Protocol Implementations.** 2022.
  Award # 2224279. Award size: \$600,000. PIs: Bryan Parno and Joshua Gancher.
  Advancing the state of the art in modular, highly automated, end-to-end formal proofs for security protocols.

Invited Talks

- BU PoPV + BUSec, December 2024: New Techniques for Secure-by-Construction Cryptography

- IETF 118, November 2023: Owl: New Directions for Security Protocol Analysis

- CyLab Partners Conference 2023: Verifying Security Protocols End-to-End with Owl

- CMU Crypto Seminar, September 2023: Owl: Compositional Verification of Security Protocols

- CMU PoP Seminar, September 2023: Owl: Compositional Verification of Security Protocols

- INRIA Prosecco Seminar, June 2023: Owl: Compositional Verification of Security Protocols

- Boston University POPV Seminar, April 2023: Owl: Compositional Verification of Security Protocols via an Information-Flow Type System

- Galois Tech Talk, March 2023: End-to-End Verification for Security Protocols

- Stanford Software Research Lunch, November 2022: A Core Calculus for Equational Proofs of Cryptographic Protocols

- New England Systems Verification Day 2022: End-to-End Verification for Security Protocols

- PLCrypt Workshop, May 2022: End-to-End Verification for Security Protocols in F*

- New England Systems Verification Day 2019: IPDL: Proving Compositional Security of Cryptographic Protocols
